Farnese Australia was founded in 2000 by the Farnese family, whose members have decades of combined professional experience and expertise in both the global stone industry and the local stone machinery manufacturing industry. We are the only designer and manufacturer of stone fabrication machinery in Australia and our machines have found homes throughout Australia, New Zealand, the United States, the United Kingdom, and Vietnam.

With over 20 years of experience in the stone industry, the team at Farnese have the experience it takes to design, install and maintain the equipment needed in your industry.

The reach of the 6 pad lifter makes it perfect for larger slabs, particularly materials like natural stone and porcelain, where minimising any flexing of material is vital to avoid risk of breakage.

Each bank of vacuum pads can be controlled individually by the easy to access switches on the control box.

A simple lever controls the movement of the lifter from 0° through to 90°
